

iVMS-4500 Start-Up Guide

Updated October 11, 2016

Before we can start streaming Live footage from your DVR system straight to your mobile device, please locate the "iVMS 4500" software in your devices app store (Google Play, IOS App Store, etc).

*****PLEASE NOTE- SOME DVR'S WILL REQUIRE THE USE OF "CCTV-MOBILE" IN PLACE OF iVMS. IF YOU ARE UNSURE, PLEASE CALL THE OFFICE SO A TECHNICIAN MAY ASSIST YOU*****

Once installed, please open the app. Press the "Menu" icon in the top left corner (Three horizontal lines). From here, you may play recorded footage, edit device information, view saved snapshots and video, as well as edit other miscellaneous settings. To proceed, select "Devices" or "Device Management" (Third option down the list).

In the top right corner, press the "+" icon, and select "Manual Adding" from the list being displayed. Fill out the following page accordingly:

Alias- (Your DVR Nickname. You may enter whatever name you want. Such as Business name)

Register Mode- (Set to IP/Domain)

Address- (Enter in your WAN IP Address, provided by the technician, or listed in email)

Port- (Provided by the technician, or listed in email)

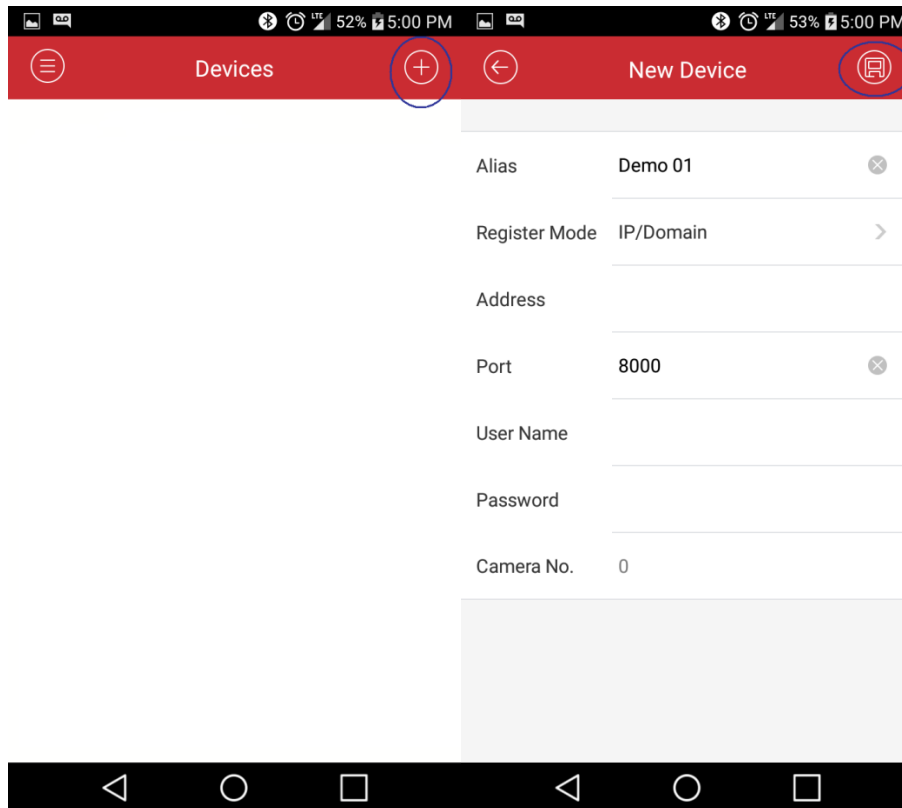

Username- (Provided by the technician, or listed in email)

Password- (Provided by the technician, or listed in email)

Camera No.- (This will fill out automatically, see instructions below)

Now, press the "Save" Icon in the upper-right hand corner (It is an image of a Floppy Disk). If all information was entered correctly, the "Camera No." spot should fill in automatically with the number of cameras present on your DVR/NVR.

If you have any further questions, please contact our office at the address listed below.
